REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The examiner respectfully asserts that none of the prior art, taken either singly or in combination, is seen to teach or suggest the use of *an operating table* comprising the particular structural configuration of *at least three elements* which are movable relative to each other, *at least two driven actuators* each controlling the displacement of two elements relative to each other, and means for detecting a risk of collision of one of the movable elements with an obstacle when executing a displacement request of a first actuator, *in association with* means for determining a corrective command order *of a second actuator different from the first actuator* upon detecting a risk of collision wherein execution of the corrective command order *by the second actuator* causes cessation of the detected risk of collision upon subsequent execution of the displacement request of the first actuator, means *to make available to a user* the corrective command order and a display to view the corrective command order as explicitly recited in Applicants' independent claims 1 and 9. With regards to the prior art, most operating tables comprising a plurality of adjustable sections and electronic safety mechanisms mainly effect the *automatic* disruption of power supplied to the single actuator of a section moving towards an obstruction or obstacle, as opposed to activating a second actuator *by the user's command* to prevent a collision as recited in Applicants' claims. (In some cases, the interruption of power to the actuator and movable section is immediately preceded by movement of the section in a direction away from the obstruction or obstacle, again without activation of a second actuator.) Hence, it is considered that the application is currently in full and proper condition for allowance.
